

Jubilee Gun Valve

The most advanced cylinder valve designed for Airgun Charging

Introducing our innovative new 'Jubilee Range' 300 bar cylinder valve, dedicated to safe filling of pneumatic pre-charged airguns.

MDE have long been a market leader in surface valves for SCUBA cylinders, extending the test life for Airgun enthusiasts to 5 years.

The new Jubilee design features an integrated gauge, improved bleed and a rubberised handwheel.

On the inlet we've also incorporated a patented device which automatically restricts the flow rate into the airgun, even if the valve is fully opened, allowing for a slower, safer fill.

The 'Jubilee Range' gun valve is uniquely certificated for CE together with Pi mark impact test (EN ISO 10297:2006).

Additional Note:

To keep pace with industry requirements, our flow restrictor has now been updated to allow a greater through flow of air during operation.

Please note that the increase in flow is still limited, and is in no way comparable to that of an un-restricted cylinder valve.
